Opens the device's native keyboard to enable search input.
6. [Favorites toggle](#)
Toggle button that further filters the currently displayed roster to only show the player's favorite Superstars.
7. [Filter Panel](#)
The main / advanced filter options are available in this panel.

Filter Panel and button breakdown

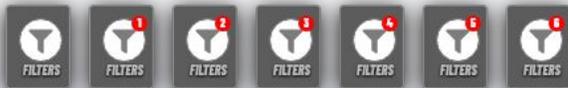

Roster Filters UX mini spec

The filter overlay appears as a small panel containing just one button on the left side of the screen.

Tapping the button expands the panel smoothly.

Tapping outside the panel on any inactive area closes it. Closing the panel does not clear the filtering.

When Filters has been applied, the button will show how many by a badge.

Closed Filter panel

Open Filter panel

Standard Filter Options:

- Affinity
 - Purple
 - Yellow
 - Red
 - Green
 - Blue
- Style
 - Brawler
 - Powerhouse

Main filter types

Roster Filters UX mini spec

Affinity

Purple chosen

Style

Powerhouse chosen

Brand

NXT chosen

Eras

1979-1982 (The Golden Era) chosen

Advanced options

Roster Filters UX mini spec

Buffs

Skill chosen

Debuffs

Skill chosen

Without Advanced options

If Advanced Options isn't shown for any reason, the Filter Panel should be more compact.

The same height as the Filter button and moved closer to the bottom of the screen.

Filters button

Filters panel

Applying a filter

Roster Filters UX mini spec

“As a Player, I want to see all of my Superstars with Purple Affinity”

Initial state

In this case, no filters have previously been selected, and the “Clear” button is disabled.

Pressed “Affinity” button

The player has pressed “Affinity” and a popout expands from the button.

The Affinity button changes state.

Selected “Purple” option

After choosing an option, the highlight moves to the selected option and the popout closes automatically.

Tapping outside the popout or on another option closes it with no change to the selected option.

End state

The roster is visibly repopulated, the selected option (affinity) changes state to show the selection.

The “clear” button is activated and show a “1” notification.

Multiple filters and Superstar Count

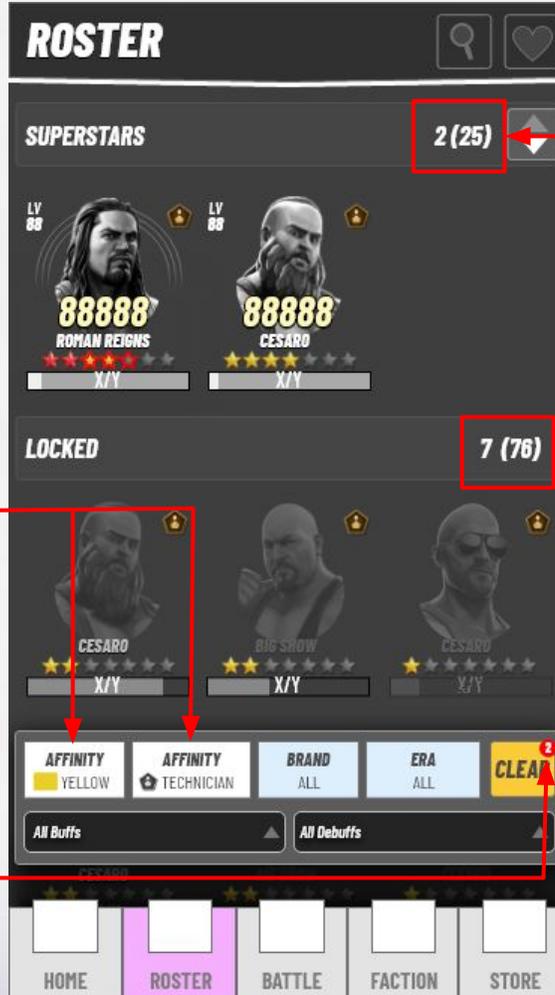

Roster Filters UX mini spec

Two filters has been applied

Filtering by multiple options further refine the resulting display.

In this example, two filters has been applied to the Roster.

The Clear button shows "2" in the badge.

The Superstar Count shows how many Superstars the player has unlocked.

By default it just shows the total number, but when the view is filtered it shows both the shown number and the total in parenthesis.

Likewise, the Locked count shows how many SuperStars the player has yet to unlock.

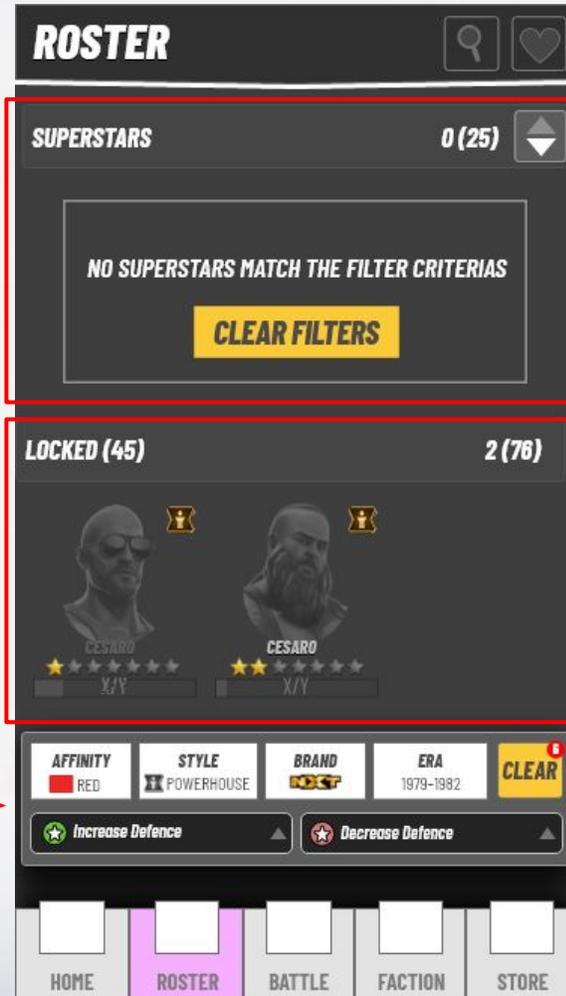

If the panel is closed, the Filters button shows how many filters are applied.

No Results

Roster Filters UX mini spec

No results from filters

As no Superstars match the selected options, a "Reset filters" prompt fills the space in the Roster.

The button has the same function as the "Clear" button on the Filters panel.

While the "Unlocked" Superstars didn't match the criteria, in this case there are two Superstars that do.

If no "Locked" Superstars are found, the locked section shows the same "Reset filters" feedback as above.

The player has enabled everything, making a result unlikely.

Sorting

Roster Filters UX mini spec

Example of filtered roster

The button will reverse the sort order. Helpful for finding newly unlocked or neglected Super Stars.

As locked characters do not have any power, they should be sorted first by Affinities, then natural Stars.

So we should see all the purple Superstars first, in order of highest number of stars to lowest, then yellow etc.

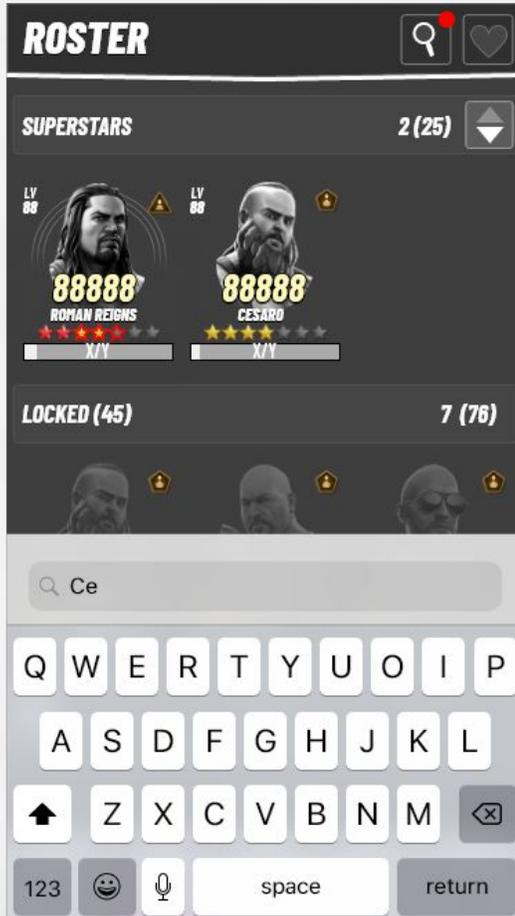

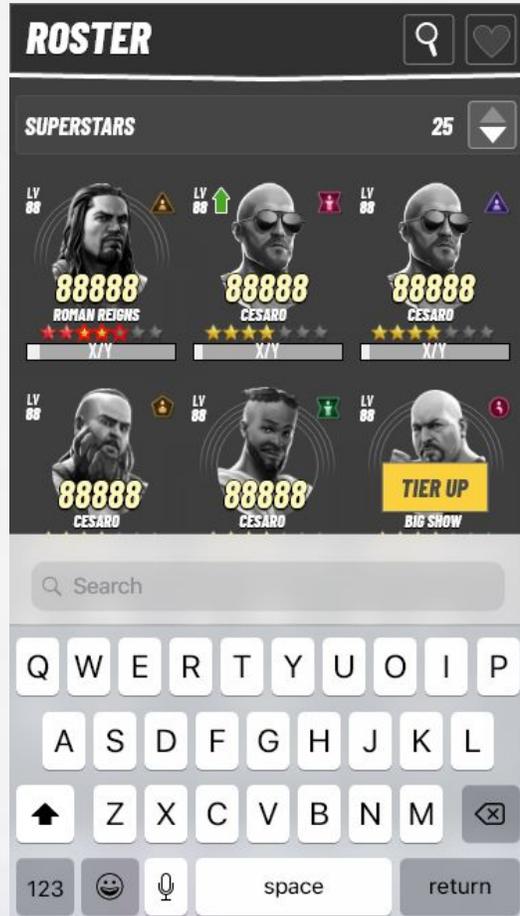

SORT ORDER

Sorting is by default done in the following prioritized order:

- Power (highest)
- Affinities
 - Purple
 - Yellow
 - Red
 - Green
 - Blue
- Natural stars (highest)

Name search

Roster Filters UX mini spec

Name Search

While typing the displayed Superstars should be filtered at every keystroke.

When the name search is active, the button is badged to emphasis this.

Clearing name search?

Note:

This slide is WIP

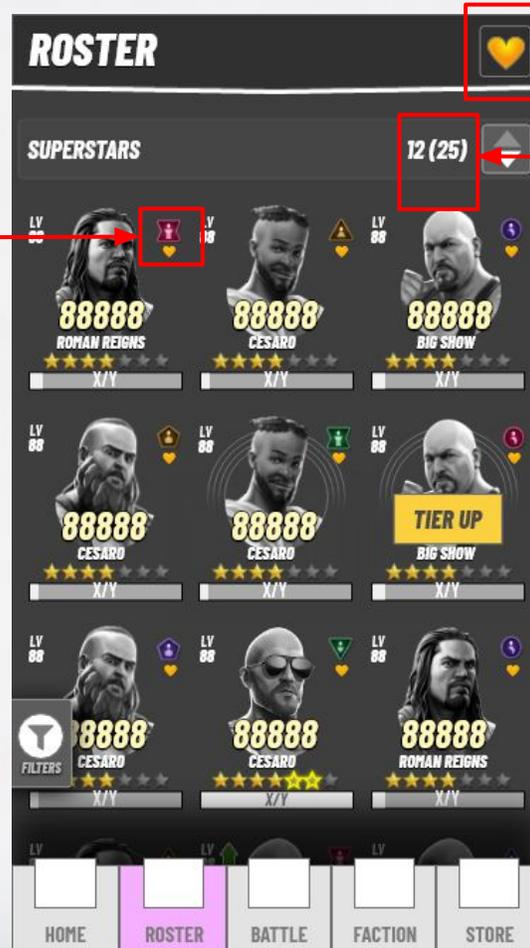

Favorites

Roster Filters UX mini spec

Note:

Favorite badge placement and functionality is yet to be determined, and is subject to change. It is shown here to improve understanding.

The Favorites button is a toggle button that is always visible on the roster.

Behaviour is different from filters, in that it will be reset to "Off" whenever the player leaves the screen.

It is meant to be a quick way to refine your current view to only show Favorites. The player can have multiple filters applied, and then by pressing the Favorites button, see which ones from that recordset that are favorites.

It does not remove regular filters when toggled on and it does not feature on the filter badge.

While the Favorites toggle is not a normal filter, the Superstar count should still be updated to show the current displayed Superstars.

VIP

Resetting and persistency

Roster Filters UX mini spec

In general, all the filter choices are carried along between screens and gameplay and are only automatically cleared when the player starts a new session.

The sole exception to this is the Favorites which is cleared upon leaving any screen.

Note:

This slide is WIP and depends on separate feature designs that is not finalized.

Auto clear

	New session	Entering "Roster screen"	Entering "Modify Squad"
Basic Filters	✓		
Advanced Filters	✓		
Favorites	✓	✓	✓
Sort order	✓		
Name Search	✓
